Description: Replacement of selected electrical distribution equipment.

Test Coordinates: Start [80.8200, 24.5700], End [80.8260, 24.5720]

Test Expectations

1. Source metadata should be extracted and stored.
2. Three projects should be discoverable from this source.
3. Project names, IDs, types, dates, locations and descriptions should be normalized.
4. Projects 1 and 2 have overlapping dates and nearby corridor information.
5. Project 3 occurs later and should not be treated as an automatic temporal conflict.
6. The source URL and sourceId must remain attached to extracted projects.
